Part III DETAILED ACTION

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121: 1.

Group I. Claims 1-14 are drawn to a disposable for an apheresis system comprsining

a blood processing vessel and a support, classified in Class 494, subclass 18.

Group II. Claims 15-25 are drawn to disposable for an apheresis system comprising a

blood processing vessel, first and second radially spaced sidewalls, a blood inlet port, means

for directing blood through the inlet port, and an outlet port, classified in Class 494, subclass

18.

Group III. Claims 26-30 are drawn to a disposable for an apheresis system comprising

a blood processing vessel, a whole blood inlet port, and a first tab, classified in Class 494,

subclass 18.

Group IV. Claims 31-33 are drawn to a disposable for an apheresis system comprising

a blood processing vessel, first and second ends, a first connector, a second connector, a

blood inlet port, and a first blood component outlet port, classified in Class 494, subclass 18.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I, II, III, and IV are related as combination and subcombination. 2.

Inventions in this relationship are distinct if it can be shown that (1) the combination as

claimed does not require the particulars of the subcombination as claimed for patentability,

and (2) that the subcombination has utility by itself or in other combinations. (M.P.E.P.

Serial Number: 08/483574

Art Unit: 3308

§ 806.05(c)). Each of the Groups claims a disposable for an apheresis system comprising a blood processing vessel. However, each of the Groups have elements different from each other as shown by the differentiation above. Each of the Groups has a separate utility such as blood separation devices, hemodialysis devices, blood collection devices, blood reinfusion devices, any apparatus that withdraws blood and processes it.

- Inventions of each Group are related as subcombinations disclosed as usable together 3. in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In this case, each of the independent claims 1, 15, 26, and 31 has necessary elements unique to each Group. For instance, Claim 1 claims a support associated with said blood-related port which is not claimed in the other independent claims. Each of the Groups can be a disposable in many typse of blood processing systems, including hemodialysis systems. See M.P.E.P. § 806.05(d).
- Because these inventions are distinct for the reasons given above and the search 4. required each Group is different, restriction for examination purposes as indicated is proper.
- A telephone call was made to Thomas R. Marsh on 6/18/96 to request an oral election 5. to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, 6. the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of

ullioci. 00/4033/

Art Unit: 3308

the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).

## Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ki O whose telephone number is (703) 308-2681.
